

Perspective Project Craft Instructions

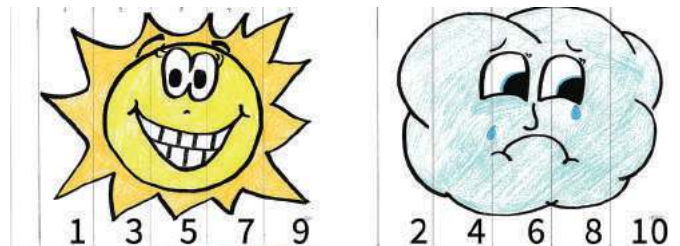

Supplies needed

- 4 pieces of card stock
- Pencil and eraser
- Tape
- Scissors
- Ruler or tape measure
- Sun & Cloud PDF images (*printed out on 2 of the 4 pieces of card stock*)

Estimated project time: 30 minutes

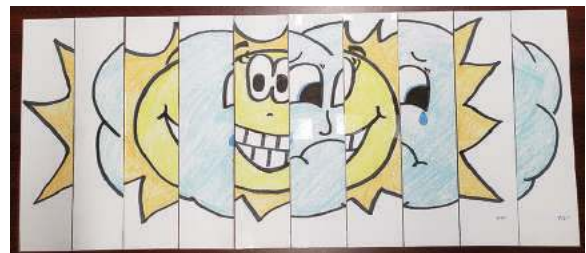

1. Print the PDF titled "Perspective Project Images" on 8.5x11 cardstock.

2. Both pictures are divided into 2-inch sections. Number the sections of the **sun**, in small letters in erasable pencil, starting at the left, 1,3,5,7,9. Number the section of the **clouds**, in erasable pencil, starting at the left, 2,4,6,8,10.

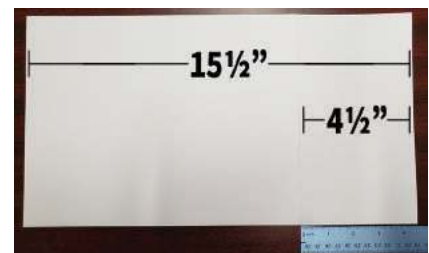

3. Cut apart the sections in both images and place them side by side in numerical order 1-10 (*see image*).

4. Starting with sections 1 and 2, tape the top, middle and bottom of each strip together, leaving a small space in between each one and erase the numbers on top (*see image*).

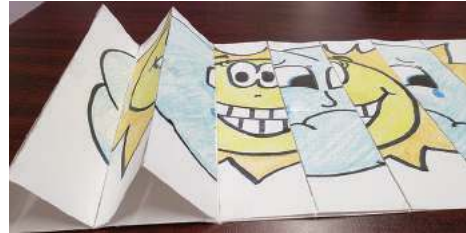

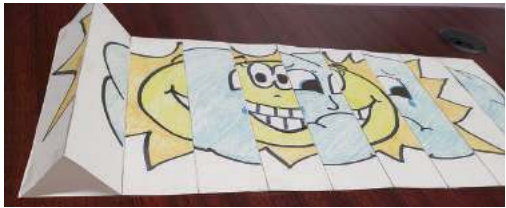

5. Take one of the two remaining sheets of cardstock and cut off 4 ½ inches.

6. Tape the 4 ½ inch piece to the last sheet of cardstock, creating one long sheet measuring 15 ½ inches.

Perspective Project Craft Instructions

7. Lay out the strip of 10 taped pieces on top of the long piece of card stock and angle strips 1 and 2 to a triangle position (see images below).

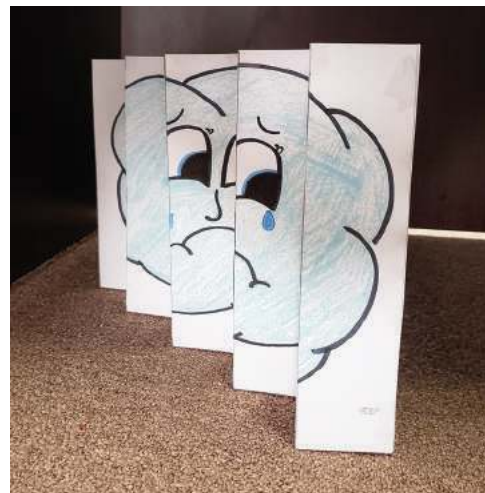

8. Tape the bottom corners of 1 and 2 to the cardstock and angle numbers 3 and 4. Make sure they are at a somewhat wide angle so the opening at the bottom is not too narrow. Tape numbers 3 and 4 in the same fashion to the card stock as well and repeat all the way through 10 (see images above).

9. Once all 10 pieces are taped to the cardstock, trim off any remaining cardstock.

10. The project is now complete. View sample images below to see how different pictures emerge based on the angle from which the project is seen.
